Features Managed Pricing Install Docs Log in to Landscape

Take control of your infrastructure

Landscape automates security patching, auditing, access management and compliance tasks across your Ubuntu estate. Use it in well-connected or airgapped environments: at sea, in space and everywhere in between. Landscape is available with an [Ubuntu Pro](#) subscription.

[Get Landscape](#) [Contact us](#)

The diagram shows a white ship on a blue sea. On the ship, there are several labeled components: 'Bridge System', 'Navigation System', 'Communication System', 'Environmental Monitoring System', 'Engine Room', 'Hull & Structure', and 'Landscape'. Red lines connect these components, indicating a network or data flow. The 'Landscape' component is highlighted with a red box and a red gear icon.

Automation

Security Management

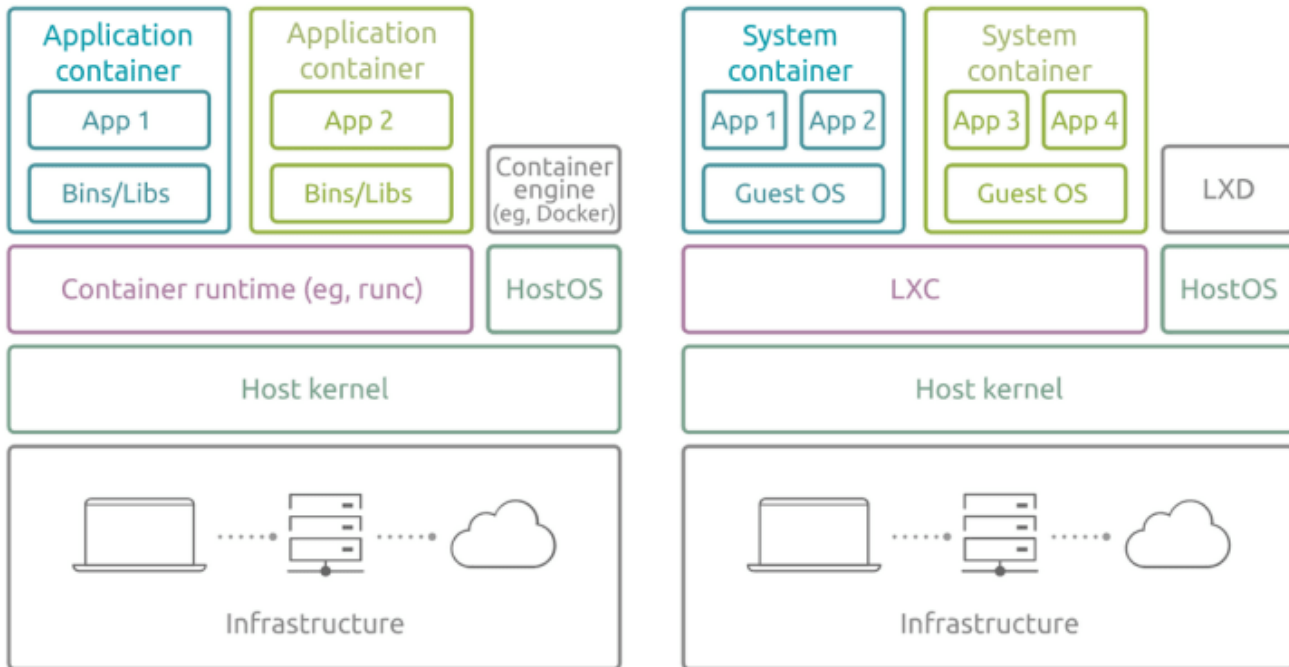

Save time and improve security at scale

- ✔ Automation for security, hardening, and compliance
- ✔ Receive alerts to update machines you specify
- ✔ Keep secure with the latest security patches
- ✔ Insights about your entire Ubuntu estate, anywhere, through a single pane of glass
- ✔ Create your own software repositories
- ✔ Extend and customise Landscape via our API

어떤 이유로
Canonical Landscape Server를
구축하게 되었나요?

Application containers (eg, Docker)

System containers (eg, LXD)

Landscape Sever 올리기

```
zeroday619@ecul:~$
```

landscape_install.sh

```
1  #!/bin/sh
2
3  ## Install lxd
4  snap list lxd && /dev/null && sudo snap refresh lxd --channel latest/stable || sudo snap install lxd --channel latest/stable
5
6  ## Configure LXD
7  sudo lxd init --auto
8
9  ## UFW Setup
10 sudo ufw allow in on lxdbr0
11 sudo ufw route allow in on lxdbr0
12 sudo ufw route allow out on lxdbr0
13
14 ## Install and configure Landscape
15
16 ### Step 1
17 sudo lxc launch ubuntu:24.04 landscape --config=user.user-data="$(cat cloud-init.yaml)"
18
19 ### Step 2
20 LANDSCAPE_IP=$(lxc list landscape --format csv -c 4 | awk '{print $1}')
21
22 ### Step 3
23 sudo lxc config device add landscape tcp6554proxyv4 proxy listen=tcp:0.0.0.0:6554 connect=tcp:${LANDSCAPE_IP}:6554
24 sudo lxc config device add landscape tcp443proxyv4 proxy listen=tcp:0.0.0.0:10443 connect=tcp:${LANDSCAPE_IP}:443
25 sudo lxc config device add landscape tcp80proxyv4 proxy listen=tcp:0.0.0.0:10080 connect=tcp:${LANDSCAPE_IP}:80
```

Setup Tailscale

```
1  #!/bin/sh
2
3  curl -fsSL https://tailscale.com/install.sh | sh
4  sudo tailscale up
```

Custom Caddy Build & Caddyfile

```
1  #!/bin/sh
2
3  sudo apt install -y debia
4  curl -1sLf 'https://dl.cl
5  curl -1sLf 'https://dl.cl
6  sudo apt update
7  sudo apt install xcaddy
8
9  xcaddy build --with githu
10 sudo mv caddy /usr/bin
```

```
1  {
2      email <cloudflare email>
3  }
4
5  (cloudflare) {
6      tls {
7          dns cloudflare <cloudflare token>
8      }
9  }
10
11  ## Landscape START ##
12  https://landscape.intra.zeroday0619.dev:443 {
13      import cloudflare
14      reverse_proxy {
15          header_up Host {host}
16          header_up X-Real-IP {remote}
17          header_up X-Forwarded-For {remote}
18          header_up X-Forwarded-Port {server_port}
19          header_up X-Forwarded-Proto {scheme}
20          header_down "Set-Cookie *; SameSite=None; Secure"
21
22          to https://muesli-vps.tail17615f.ts.net:10443
23          transport http {
24              tls
25              tls_insecure_skip_verify
26          }
27      }
28  }
29
30  (layer4) {
31      servers {
32          landscape {
33              listen ["0.0.0.0:6554"],
34              routes [
35                  {
36                      handle [
37                          {
38                              handler proxy
39                              upstreams [
40                                  {
41                                      dial [muesli-vps.tail17615f.ts.net:6554]
42                                  }
43                              ]
44                          }
45                      ]
46                  }
47              ]
48          }
49      }
50  }
51  }
52  ## Landscape END ##
```

```
